#1 During the first septic cleaning in Oct 2024 a crack was observed near the bottom of the divider of the effluent chamber. At that time everything was looking very good to our service person. Since we would not need a cleaning for several years (only 2 people, 1750 gallon tank) and in doing our due diligence we hired a septic inspector to survey our entire system and it was determined the crack had no effect on the function of the septic system at all. It was determined however that there were four minor issues that needed to be addressed that would improve the overall performance of the system. We hired an independent contractor who made the adjustments from the inspector's report in a timely manner so the system is now running at optimum.

#2 2015 Perimeter outlet pipe collapsed and caused water to back up through the drain in the basement floor. Remediation of the subsequent flooding was quickly performed by Serve Pro. Extensive excavation of the front yard and driveway to remove the old pipes and correct the pitch and depth included removing boulders from the stone wall along the driveway. These very large stones contributed to the crushing of these pipes and should never be returned to the open space along the driveway.

IMPROVEMENTS

2004 addition of guest bedroom suite with 3/4 bath with radiant heat

2005 addition of bedroom and walk in closet, skylight above garage, skylight in stair landing, hardwood flooring all upstairs bedrooms and hallway

2009 relocated 1950's one car garage w/loft to new pad at top of driveway

2016 new roof

2018 granite countertops in kitchen

2019 complete septic system

2021 new stainless steel gas range, french doors fridge (dish washer 2019)

2021 replaced culvert at end of driveway
